

## What's new in ControlMaestro 2010?

### *New trending Module*

This new trending module has been totally redesigned by including a high-performance graphical interface, new configurable graph types, overlapping curves management, an automatic minimum and maximum calculation and, the option of zooming using the mouse wheel, thus significantly improving legibility, module ergonomics and effectiveness. Henceforth, thanks to Java technology, the trending module is strictly identical in studio and web mode, standardizing workspace, while maintaining the same interface and functionalities.

### *New Data Storage in SQL Server (VFI Sql)*

This enhancement allows users to store the entire history of the application variables in a SQL Server database. With SQL Server 2008 Express fully integrated into ControlMaestro 2010 has unified data storage giving trending module improved execution performance, efficiency and productivity.

### *Compatibility Windows 7 and Windows Server 2008*

This new version is compatible with Windows 7 and Windows Server 2008 operating systems. Previous versions of ControlMaestro being already compatible for the following systems:

- Windows 2000 professional or server
- Windows XP professional
- Windows 2003 server
- Windows Vista

### *Virtualization Support*

ControlMaestro can now be installed on Virtual Servers using such as VMware tools thus allowing users to rationalise server usage.

### *New SOFREL communication drivers Support*

New LACBus PC/TCP/IP and RTU communication drivers has been developed and integrated into ControlMaestro 2010 to allow dialogue with last SOFREL S500 & BOX PLCs for modular and autonomous teleprocessing.

### **Wireless communication via the ZigBee protocol**

ELUTIONS provides wireless hardware solutions using the Zigbee protocol. With a new communication driver, ControlMaestro 2010 is able to retrieve in real-time all the data collected by its equipments, offering a global solution including hardware and software. This association allows energy consumption monitoring, and is a response to the actual building management problems. Nonetheless, in various multi-site cases, this architecture can be extended through the Maestro enterprise solution that enables energy consumption and equipment management and centralizes all the information into a single web platform adapted to the company unique needs.
