The 15" brand-new integrated bridge

The brand-new NA23 integrated dashboard is the very last revolution in the field of displays. It is based on a solid background of system integration expertise, sea-going experience, and innovative engineering. It is a 3 touch screen displays technology physically integrated in one crystal console which features a very high-tech, modern and elegant design. The NA23 has been specifically designed for use in marine environments and combines 3 true crystal touch panel 15" XGA displays with high brightness screen technology for unmatched daylight viewable colour.

The product offers premium display solution for luxury cruising. It is based on true glass and it can be flush mounted into the vessels helm of dashboard with no protruding bezel, button or knobs.

The solution is optimal for superior optical sunlight or unfavourable light conditions and offers bright colour, wide viewing angles and excellent contrast. Engineered with bonded glass touch screen to eliminate condensation, minimize glare, and provide superior viewing experience.

Available features:

- N°3 x 15" 1000 cd/m2 Daylight viewable colour displays
- N°3 High-resolution native XGA (1024 x 768) displays with excellent contrast and a wide viewing angle
- DVI-D Video Input ports
- USB. Device interfaces (Touch screen interface)
- USB. Host ports from internal Hub to further extend external Video Multiplexer functions.
- Rugged and IP65 front protection
- True Glass Projective capacitive Touch Screen with AR coating

The NA23 Display supports the rich common functionality of the modern Monitor system:

- True glass touch front panel AR coating and Bonded with display
- Aluminium resistant enclosure
- ON/OFF touch-keys
- OSD (3 touch-keys control for each display)
- Dimming 1:100
